EXTREME POURING SOLUTIONS...

Extreme liquid processing applications are easily handled by the **DM-700HFR/AMTS Series XtremeDuty™** hand dispensing nozzle from DRUM-MATES Inc. Made with Stainless steel, Teflon and aluminum, this heavy wall nozzle is excellent for rugged industrial use and can safely transfer virtually any solvent, alcohol, fuel or chemical compatible with these materials. The nozzle offers fine control transfer from pumps or gravity dispensing from drums, totes, storage tanks or reservoirs.

Useful for extreme duty liquid dispensing operations in any industry, it helps ensure greater operator and environmental safety by preventing spillage during critical transfer tasks. It also simplifies bulk liquid dispensing or repacking of liquid products into smaller containers. Smooth trigger action enables variable flow rate from trickle to full pouring operation. The nozzle has heavy duty construction for extra strength and a maximum opening flow path prevents foaming or shear effects.

The **DM-700HFR/AMTS** hand nozzle provides flow rates up to 29 Gpm at 35 Psi, with a choice of ½, ¾ or 1" Npt or hose barb base. Optional safety swivel available in request.
