Dispensing Nozzle for Safer Solutions

The DRUM-MATES® DM-85HFR all polypropylene dispensing nozzle provides excellent outflow control for carefully transferring all kinds of liquids from pumps, processing equipment, drums, tanks, vats, and reservoirs into other containers. The economical nozzle safely dispenses from a trickle flow up to 40 gallons per minute

and from low pressure gravity feed to higher pressure discharging at up to 150 psi. It can increase operator and environmental safety and simplifies dispensing tasks. Manufactured with virgin

polypropylene, Viton internals and a 316 s.s. trigger spring, the hand regulator offers outstanding chemical resistance. Hose barbs in 1/2", 3/4" and 1.0" are available (specify when ordering). This nozzle is particularly suited to the requirements of pump and processing equipment users, for those repacking bulk liquids into small containers, pump and process equipment O.E.M.'s and distributors, hose & tubing distributors, premium incentive gift providers and general end-users. Optional Accessory: DM-85THC, flexible tubing, 3/4" ID in 15 ft. increment lengths.
