Quickly Blends a Full Drum

## High Efficiency Drum Mixer!

The DRUM-MATE® high efficiency drum mixer (**Model No. DM55BAS**) greatly increases Quality Control while lowering batch mixing time and costs. It mixes very quickly by moving the liquid at high velocity at virtually any shaft speed because the four blade sets blend at the top, middle and bottom drum levels at the same time. The patented, adjustable "Swing-Wing™ turbine impellers" fit through a 50 mm bung hole and open and close automatically. It will mix a wider range of viscosities and blend them more thoroughly says the manufacturer, DRUM-MATES®. The mixer is unique in its ability to mix liquid compounds without introducing air and will not cause frothing or foaming.

These mixers are available in zinc plated or stainless steel models and can be adapted to a wide variety of demanding surface coating, adhesive, chemical and other mixing applications, from low impact eddy-current stirring for extra sensitive materials, to a high shear homogenization effect. The mixers are available in hand-held, rim mounting and bung hole mounting models and in other sizes for mixing 20 litre drums up to 5000 litre totes or tanks, depending on the viscosity. A wide range of accessories are available to support various technical applications and special mixing needs.
