# ThreadReducer Solutions

For versatile bung thread reduction

Mounting equipment in bung holes is now easier for operators, process engineers or product designers with the availability of DRUM-MATES™ economical ThreadReducer™ Series bung adapters. One of the best, most versatile series of bung adapters for thread reduction is now available with the new DM-55BTR Series for all kinds of equipment mounting into 2" NPT bung holes in drums, totes, tanks and other vessels.

These ThreadReducers™ help process operators solve application mounting problems or make equipment assembly and process equipment design for 2" Npt bungholes much easier. Pipe thread mounting in ½", ¾", 1", 1.25", and 1.5" sizes permit mounting of process devices including pump pick-up tubes, level sensors, pH monitors, thermometers, sensitive metering equipment, bung faucets, bung funnels, sampling tubes, bung entry heaters and mixers and a wide variety of other equipment.

Mounting equipment into the 2" Npt fine thread or Buttress\* coarse thread bung holes of drums, IBC's (totes) tanks, reservoirs, day tanks and other vessels can be time consuming, difficult and unsafe if not handled correctly. The ThreadReducers™ enable easier, speedier mounting of equipment and provide a stable platform for equipment function. Operator and environmental exposure to noxious, toxic or dangerous fumes are also limited by quicker mounting with this economical time-saver and provides a tight thread bunghole closure on the equipment.

Available in polypropylene plastic and 316 stainless steel, the NPT thread ThreadReducers™ allows users of plastic mounted devices to manage equipment control much more carefully. Apparatus can be permanently mounted in the ThreadReducers™ ensuring the best seal and protection over the service life of the equipment. Easy tightening in drums, totes, tanks and other containers is permitted with its "Wide-Hex" grip mounting feature. The 316 stainless steel model provides versatile use in most equipment applications covering a very wide chemical compatibility range for laboratories and clean rooms, food, beverage, pharmaceutical, chemical, cosmetic, bio-science, nuclear, aerospace, agricultural and other industries. An Npt to Buttress coarse ThreadConverter™ is also offered for drums with coarse threads.
